

Task #6

Write a function that converts an object into an array, where each element represents a key-value pair in the form of an array.

```
'use strict';

/*
test cases:
toArray({ a: 1, b: 2 }) // output → [["a", 1], ["b", 2]]

toArray({ shrimp: 15, tots: 12 }) // output → ["shrimp", 15], ["tots", 12]]

toArray({}) // output → []

toArray({ foo: 33, bar: 45, baz: 67 }) // output → ["foo", 33], ["bar", 45],
["baz", 67]]
*/

var obj = {
  shrimp: 15,
  tots: 12,
};
var result = Object.keys(obj).map(function (key) {
  return [Number(key), obj[key]];
});

console.log(result);
```
