

## Task#5

Create a function that takes a "base number" as an argument. This function should return another function which takes a new argument, and returns the sum of the "base number" and the new argument.

```
/*
  testcases:
    input: 2   output: 7
    input: -8  output: -3
*/

const baseFunction = (dig) => {
  const plusFive = () => 5;

  return dig + plusFive();
};

console.log(baseFunction(2));
```
